Edited by [Editor's Name]

This book presents a collection of essays that explore the concepts of measurement, aggregation, and decomposition in economics. The essays are written by leading economists and provide a comprehensive overview of the latest research in these areas.

The book is divided into four parts. The first part, "Concepts," examines the fundamental concepts of measurement, aggregation, and decomposition. The second part, "Measurement," explores the different methods that economists use to measure economic phenomena. The third part, "Aggregation," examines the problems that arise when economists aggregate individual data into group data. The fourth part, "Decomposition," explores the techniques that economists use to decompose economic data into its component parts.
