

Micromanipulation In Assisted Conception: A Cutting-Edge Guide

Assisted reproductive technologies (ARTs) have revolutionized the treatment of infertility, and micromanipulation techniques have played a major role in this success. Micromanipulation involves the use of specialized instruments to manipulate gametes and embryos under a microscope, and it has been used to overcome a variety of fertility challenges.

Micromanipulation in Assisted Conception: A User's Manual and Troubleshooting Guide by Steven D. Fleming

This book provides a comprehensive overview of the latest micromanipulation techniques used in assisted conception, including:

- Intracytoplasmic sperm injection (ICSI)
- Embryo biopsy
- Preimplantation genetic diagnosis (PGD)

Each chapter is written by a leading expert in the field and provides a detailed discussion of the technique, its indications, and its outcomes. The book also includes a glossary of terms and an index.

This book is an essential resource for reproductive endocrinologists, embryologists, and other healthcare professionals who are involved in the treatment of infertility.

Table of Contents

1. to Micromanipulation in Assisted Conception
2. Intracytoplasmic Sperm Injection (ICSI)
3. Embryo Biopsy
4. Preimplantation Genetic Diagnosis (PGD)
5. Other Micromanipulation Techniques
6. Future Directions in Micromanipulation

About the Authors

The authors of this book are leading experts in the field of micromanipulation in assisted conception. They have extensive experience in the development and application of these techniques, and they have published numerous scientific papers and book chapters on the subject.

- Dr. John Doe is a reproductive endocrinologist and infertility specialist. He is the director of the IVF clinic at the University of California, San Francisco.

- Dr. Jane Doe is an embryologist and the director of the 胚胎学实验室 at the University of California, San Francisco.
